

PUBLICATION AND MANUSCRIPT SUBMISSION GUIDELINES

SETARI - Science, Engineering, Technology, Applied Research & Innovation · Versão 1.0 / Version 1.0 · Agosto/August 2026 · Editorial contact: revistasetari@gmail.com

These guidelines establish the initial standards for submission, review and preparation of SETARI manuscripts in Science, Engineering, Technology, Applied Research and Innovation.

1. Editorial scope

SETARI publishes original and review papers in Science, Engineering, Technology and Applied Research, emphasizing contributions that combine scientific rigor, technological relevance, applicability and innovation.

- Electrical and Electronic Engineering, Energy, Smart Grids and electric mobility;
- Automation, Control, Instrumentation, Robotics, embedded systems and industrial networks;
- Mechanical Engineering, manufacturing, maintenance, reliability, modeling and simulation;
- Production/Industrial Engineering, optimization, logistics, quality and production systems;
- Civil Engineering, infrastructure, sanitation, water resources, construction and smart cities;
- Chemical and Environmental Engineering, materials, processes, energy and sustainability;
- Computing applied to Engineering, AI, data science, IoT, digital twins and cyber-physical systems;
- Engineering Education, virtual laboratories, simulation and educational technologies.

2. Manuscript types

The article category must be selected at submission. Page limits include all parts of the final publication file.

Category	Expected scope	Limit
Original article	Original research with method, results, discussion and contribution.	Up to 15 pages
Review article	Critical, systematic or bibliometric review.	Up to 15 pages
Technological/applied article	Development, validation or application of a method/system/process.	Up to 15 pages
Case study	Technically relevant case with generalizable lessons.	Up to 12 pages
Technical note	Focused result, method, instrument, dataset, software or solution.	Up to 8 pages

3. Languages and metadata

SETARI accepts manuscripts in English or Portuguese. To improve international discoverability, title, abstract and keywords must be provided in both languages.

- Title preferably up to 18 words;
- Abstract and Resumo between 200 and 250 words;
- 3 to 6 keywords in each language;
- ORCID is required for the corresponding author and recommended for all authors at submission; all authors should provide ORCID in the final version when available;
- Full affiliation including institution, unit, city, state/region and country.

4. Formatting

Manuscripts must use the official SETARI template. The published version uses A4 format and a two-column body. Original, review and technological papers are normally limited to 15 pages.

- Body font: Times New Roman equivalent, 9.5-10 pt;
- International System of Units (SI);
- Decimal section numbering;
- Figures and tables placed near first citation;

- Avoid extensive footnotes.

5. Article structure

Organization should reflect the nature of the research while maintaining a clear relationship among problem, method, evidence and conclusion.

- Introduction: problem, relevance, state of the art, gap, objective and contribution;
- Background/Related work: critical synthesis;
- Materials and Methods: reproducible description;
- Results: organized evidence and quantitative findings where applicable;
- Discussion: interpretation, comparison, limitations and implications;
- Conclusions: response to objectives and contribution;
- Declarations: funding, conflicts, ethics, data/code, CRediT and AI;
- References: SETARI numbered system.

6. Figures and tables

Figures and tables must be numbered in citation order, have self-contained captions and remain legible at final size.

- Raster images: at least 300 dpi is recommended;
- Graphs must identify axes, quantities and units;
- Vector files are preferred for diagrams and plots;
- Do not duplicate the same data in text, table and figure;
- Third-party adapted material must identify source and permission when required.

7. Equations, symbols and units

Equations must be editable, numbered when cited and accompanied by variable definitions. Use SI and include nomenclature when many symbols are used.

8. References and citations

SETARI uses a numbered citation system in order of first appearance: [1], [2], [3-5]. References must be complete, verifiable and directly related to the manuscript.

- Include DOI as a full URL whenever available;
- Avoid nonexistent references, excessive self-citation and citations unrelated to the supported claim;
- Prioritize peer-reviewed and current literature when appropriate;
- Data, software, standards and preprints may be cited when technically relevant.

Example: [1] A. A. Author and B. B. Author, "Article title," Journal Title, vol. 12, no. 3, pp. 100-112, 2026. <https://doi.org/10.xxxx/xxxxx>

9. Authorship and CRediT

All authors must have made substantial contributions and accept responsibility for the work. The final version must state contributor roles using the CRediT taxonomy.

- Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology;
- Project administration; Resources; Software; Supervision; Validation; Visualization;
- Writing - original draft; Writing - review & editing.

10. Ethics, integrity and originality

Submission implies that the manuscript is original, approved by all authors and not simultaneously under review elsewhere. SETARI may use similarity tools and editorial checks.

- Plagiarism, data fabrication/falsification, deceptive image manipulation, improper authorship and redundant publication are incompatible with editorial policy;
- No automatic similarity percentage will be used as the sole rejection criterion;
- Research involving humans, animals or sensitive data must report ethics approval/waiver and consent when applicable;
- Financial, personal or institutional conflicts must be disclosed;
- Suspected misconduct will be handled confidentially with documentation and an opportunity to respond.

11. Use of generative artificial intelligence

AI tools cannot be listed as authors. Authors remain fully responsible for the accuracy, originality, data, code, images and references of the work.

- Substantive AI use in writing, code generation, analysis, synthesis or images must be disclosed;
- AI-assisted content and references must be verified by the authors;
- Reviewers should not upload confidential manuscripts to public AI services;
- Editorial and scientific decisions remain human responsibilities.

12. Data, software and reproducibility

SETARI encourages deposition of data, code, scripts, models and materials in trusted repositories, preferably with persistent identifiers. Sharing restrictions must be justified.

13. Peer-review process

Manuscripts undergo editorial screening and, if suitable, double-blind peer review, normally with at least two independent reports. The final decision belongs to the responsible Editor.

- Possible decisions: desk rejection, major revision, minor revision, new review round, acceptance or acceptance subject to editorial corrections;
- Divergent reviews may lead to consultation of a third reviewer;
- Revised manuscripts must include a point-by-point response;
- The review file must preserve author anonymity.

14. Preprints and conference papers

Preprints and preliminary versions may be considered when declared and cited. Conference papers may be submitted as substantially expanded articles provided copyright and transparency requirements are met.

15. Corrections, retractions and post-publication

Relevant post-publication errors may lead to corrections, expressions of concern or retractions, transparently linked to the original scholarly record.

16. Copyright, open access and fees

SETARI will be structured as an open-access journal. The final license and APC/fee policy must be clearly stated before submissions open. Version 1.0 establishes no publication fee.

- CC BY 4.0 is recommended for consideration, subject to formal publisher approval;
- No charge should be applied retroactively to manuscripts submitted under a previous policy.

17. Submission files

Submissions should include the files needed for the editorial process.

- File 1 - Blinded manuscript: no names, affiliations, acknowledgements or identifying details;
- File 2 - Title page: authors, ORCID, affiliations, corresponding author and administrative declarations;
- File 3 - High-resolution figures when requested;
- File 4 - Supplementary material/data when applicable;
- Revisions: revised manuscript and point-by-point response letter.

18. Submission checklist

Before completing submission, confirm all formal and scientific requirements.

- Correct scope and article category;
- Page limit respected;
- Bilingual title, abstracts and keywords;
- Blinded file contains no identification;
- Objective and contribution clearly stated;
- Methods sufficiently detailed and reproducible;
- Figures/tables legible and cited;
- Numbered references and DOI where available;
- Required declarations included;

- All authors approved submission and no simultaneous submission exists.

19. Administrative items to confirm before launch

Before official submissions open, the Editorial Board should formalize the publisher/responsible entity, ISSN/e-ISSN, publication frequency, domain, DOI arrangements, license, fee policy, digital preservation and archiving policy.

20. Good-practice references

- Committee on Publication Ethics (COPE) - Core Practices and editorial integrity guidance.
- Directory of Open Access Journals (DOAJ) - Principles of Transparency and Best Practice in Scholarly Publishing.
- Crossref - DOI display and reference metadata guidance.
- ORCID - researcher identification and journal workflow guidance.
- NISO CRediT - Contributor Role Taxonomy.

Before official launch, the administrative items in Section 19 must be approved and published on the SETARI website.
